#2. The Department of Agriculture was studying the effects of several levels of a fertilizer on the growth of a plant. For some analyses, it might be useful to convert the fertilizer levels to an ordered factor. The data were 10,10,10, 20,20,50,10,20,10,50,20,50,20,10. a. Write the codes and describe the result.

#Using a factor variable is the most effective method for expressing the workout levels in R.

#The three choices for activity levels in this instance are "n" (none), "l" (light), and "i" (intense).

#To appropriately describe the activity levels for each participant, you can use these levels to genera
