ans. manufacturer, model, trans, drv, fl, class variables are categorical

- 1c. Which are continuous variables? ans. X, displ, year, cyl, cty, hwy are continuous variables
 - 2. Which manufacturer has the most models in this data set? Which model has the most variations? Show your answer.

```
manufacturer_counts <- table(open_mpg$manufacturer)

most_models_manufacturer <- as.character(names(manufacturer_counts)[which.max(manufacturer_counts)])

model_counts <- table(open_mpg$model)

most_variations_model <- as.character(names(model_counts)[which.max(model_counts)])

print(paste("The manufacturer with the most models is:", most_models_manufacturer))

## [1] "The manufacturer with the most woriations is:", most_variations_model))

## [1] "The model with the most variations is: caravan 2wd"

2. Same dataset will be used. You are going to show the relationship of the model and the manufacturer. 2a.What does $ggplot(mpg, aes(model, manufacturer)) + geom_point()$ show?

ans. Plots the mpgdataset with model on the x-axis and manufacturer on the y-axis. Each point represents a car model

2b. For you, is it useful? If not, how could you modify the data to make it more informative?

It's useful to know how many models each manufacturer produces. To make it more interesting, I can color code each point based on the class variable and add a label using the cty variable.

3. Plot the model and the year using ggplot(). Use only the top 20 observations. Write the codes and its results.

5.Plot the relationship between cyl - number of cylinders and displ - engine displacement using geom_point with aesthetic color = engine displacement. Title should be "Relationship between No. of Cylinders and Engine Displacement".

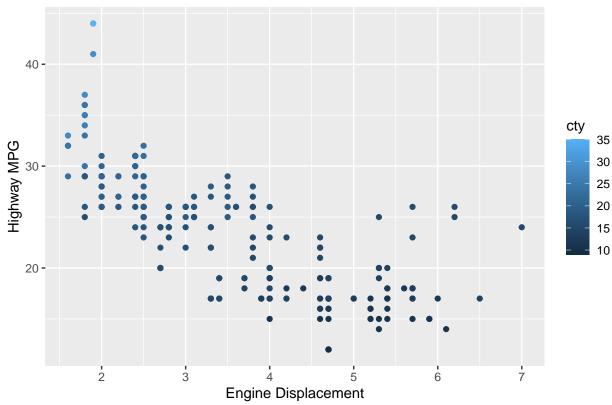

5a. How would you describe its relationship? Show the codes and its result.

The scatter figure illustrates the relationship between engine displacement and cylinder count, showing that larger engines with more cylinders often have higher displacement. As cylinder count increases, so does the displacement.

6. Plot the relationship between displ (engine displacement) and hwy(highway miles per gallon). Mapped it with a continuous variable you have identified in #1-c. What is its result? Why it produced such output?

Each point in the scatterplot represents a city's fuel efficiency, and it displays the relationship between engine displacement and highway miles per gallon. Insight into vehicle fuel efficiency for various engine sizes can be gained by visualizing the relationship between various city fuel efficiency levels and displand hwy.

6.Import the traffic.csv onto your R environment. a.How many numbers of observation does it have? What are the variables of the traffic dataset the Show your answer.
